

Our mission

To revolutionize utility vegetation management by providing cutting-edge drone and AI-based solutions that enhance safety, reliability, and operational efficiency for utility companies and electric cooperatives.

Our Operational Base

Based out of Tennessee and Florida, LineIntel is uniquely positioned with an ISA Certified Arborist on our team, ensuring that all vegetation management reports meet regulatory standards and provide the botanical analysis that utilities require for proper vegetation management decisions.

LINEINTEL

PREDICT. PRIORITIZE.
PREVENT

The Problem Utilities Face

Vegetation is the leading cause of power outages, responsible for over 40% of all distribution system interruptions.

- Unpredictable vegetation growth patterns
- Seasonal and weather-related variations
- High costs of emergency tree trimming
- Customer complaints about outages
- Regulatory compliance requirements

Built For Electric Cooperatives

- Rural cooperatives with limited vegetation budgets and extensive service territories
- Municipal utilities balancing cost control with reliability requirements
- Regional IOUs seeking supplemental risk analysis and validation tools

End Users

- Vegetation managers, system operators, certified arborists, line crews, and customers reporting field issues
- General managers and board members accountable for system reliability, safety compliance, and budget oversight

Manage risks before they become problems

Risk Intelligence

AI-powered vegetation detection and growth prediction to prevent power outages and optimize maintenance schedules. Backed by Certified Arborist expertise for regulatory-compliant reports.

- Certified Arborist Reports
- Predictive Growth Modeling
- Risk Assessment
- Proactive Maintenance

Our Products

Vegetation Management

AI-Powered detection and monitoring of vegetation encroachment near power lines with certified arborist reports.

Structural Inspection

Comprehensive analysis of poles, towers, and hardware for damage and wear.

Compliance Monitoring

Regulatory reporting for utility standards.

Emergency Response

Rapid deployment for storm damage assessment and emergency inspections.

Predictive Maintenance

Data-driven insights to predict and prevent equipment failures before they occur.

Strategic Partners
