

LineIntel's mobile app ensures faster response times, greater visibility, and seamless communication from the field to the office.

- **Issue Reporting** – One-tap photo capture with automatic GPS tagging and dropdown menus for issue categorization, streamlining field documentation.
- **Status Tracking** – Real-time visibility into report status: “submitted,” “work order created,” “crew assigned,” or “completed” with estimated resolution times.
- **Smart Notifications** – Push alerts for power outages, severe weather warnings, job assignments, and completion confirmations targeted to user location and role.
- **Crew Mode** – Dedicated interface for field personnel with job assignments, completion checklists, and direct communication with dispatch operations.
- **Offline Functionality** – Capture photos and data in remote areas with no cellular service, automatically syncing when connectivity is restored.

Are You Ready to Transform Your Utility Vegetation Management?

LINEINTEL

Predict. Prioritize. Prevent. AI-Assisted Vegetation Risk & Field Reporting

Manage Risks Before They Become Problems

The Problem Utilities Face

Vegetation is the leading cause of power outages, responsible for over 40% of all distribution system interruptions, affecting millions of customers annually:

- Unpredictable vegetation growth patterns
- Seasonal and weather-related variations
- High costs of emergency tree trimming
- Customer complaints about outages
- Regulatory compliance requirements

Our Mission

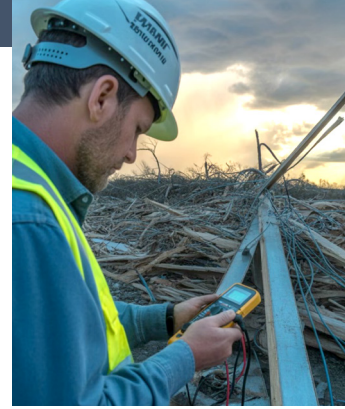

To revolutionize utility vegetation management by providing cutting-edge drone and AI-based solutions that enhance safety, reliability, and operational efficiency for utility companies and electric cooperatives.

What We Do

Based in Tennessee and Florida, LineIntel combines drones, satellites, AI, and arborist validation into a comprehensive vegetation risk intelligence platform that transforms how utilities GMs and board members in charge of system reliability, safety compliance, and budget oversight manage utility vegetation

Who We Serve

- Rural cooperatives with limited vegetation budgets and extensive service territories.
- Municipal utilities balancing cost control with reliability requirements.
- Regional IOUs seeking supplemental risk analysis and validation tools.

Our Products

- **Vegetation Management** – AI-Powered detection and monitoring of vegetation encroachment near power lines with certified arborist reports.**
- **Structural Inspection**
Comprehensive analysis of poles, towers, and hardware for damage and wear.
- **Compliance Monitoring**
Regulatory reporting for utility standards.
- **Emergency Response**
Rapid deployment for storm damage assessment and emergency inspections.
- **Predictive Maintenance**
Data-driven insights to predict and prevent equipment failures before they occur.

*** LineIntel is uniquely positioned with an ISA Certified Arborist on our team, ensuring that all vegetation management reports meet regulatory standards and provide the botanical analysis that utilities require for proper vegetation management decisions*
